Leading Swiss ISP selects Rockliffe MailSite

December 5, 2000 - Swiss Internet Service Provider, Infomaniak Network SA, has chosen Rockliffe MailSite DataCenter to provide e-mail services to its rapidly expanding customer base.

“We needed a rock solid solution that was robust enough to provide the most reliable possible service for our customers”, said Fabian Lucchi, technical manager of Infomaniak Network. “Our customer base is currently growing very rapidly and MailSite DataCenter’s scalability means we can quickly and safely add new customers.

“Our research found that MailSite DataCenter not only offered the level of performance we needed, but was considered the best of breed for ease of installation, low cost, dynamic support and branding capabilities. Our tests showed that MailSite DataCenter is capable of sending and receiving over 100,000 messages simultaneously without blinking.”

Another key benefit of MailSite for Infomaniak and other international users is that MailSite’s built-in web mail, MailSite Express, allows users to choose their preferred language when they log on. MailSite Express is now available in a wide range of language options including all the major European languages, Turkish, Chinese and Japanese. This enabled Infomaniak to quickly install MailSite Express to host web-based e-mail in multiple languages with no additional charges. MailSite Express is built using Active Service Pages (ASP) enabling clients to quickly brand and customise it with corporate logos.

“In today’s competitive ISP market web-based e-mail has become a critical feature and MailSite Express provides messaging service providers with an affordable out-of-the-box solution based on the secure, fault-tolerant MailSite DataCenter messaging platform..

Infomaniak’s e-mail services run on two load-balanced, fully redundant MailSite servers. Messages and mailbox data are stored on remote, secure data servers connected through a 100Mb FastEthernet link. For more information contact Fabian Lucchi, Infomaniak Network, www.infomaniak.ch, hostmaster@infomaniak.ch

About Rockliffe

From the company's inception, Rockliffe has been committed to leading the market in Internet messaging infrastructure software designed specifically for Windows NT/2000. Rockliffe's flagship product, MailSite, is an integrated messaging platform that includes SMTP, POP, IMAP and LDAP e-mail services, a Web messaging client, a WAP e-mail client and a list server. MailSite also includes state-of-the-art server-level protection against Spam and unauthorised relay. It is remarkably easy to use, and can quickly accommodate additional users with minimal investment in hardware, software, personnel and premises. Rockliffe MailSite's unique scalability provides an affordable long-term messaging solution for companies and organisations of all shapes and sizes, from the smallest partnership to the largest service provider.
