## **FULL-FEATURED WEBMAIL NOW INCLUDED WITH ROCKLIFFE MAILSITE FOR WINDOWS 2000**

**Rockliffe launches MailSite 4 including MailSite Express, an extremely fast and easily brandable web-based email client, and MailSite DataCenter, which scales up to 1 million users per server**

San Jose, Ca, February 15, 2000-----Rockliffe, a leading developer of scalable Internet email server software for Windows NT/2000, today announced the immediate availability of MailSite Express, Rockliffe's remarkable new web-based email client that is included free of charge with all MailSite 4 products.

MailSite Express allows corporations and Internet service providers of all sizes to provide an email service that can be accessed from any web browser, anywhere, at any time. Building on the standards set by Microsoft Hotmail (tm) and Yahoo Mail (tm), MailSite Express will allow anyone to set up their own web-based email service with ease. MailSite Express is built using Active Server Pages, which make it easy and quick to brand and customize with corporate logos.

“We are particularly proud of the speed and ease of use of MailSite Express,” said Rockliffe’s president and CEO John Davies. “Webmail is a liberating and cost-effective communications solution, but only if it performs well.” He continued, “We aimed to combine performance, style and functionality in MailSite Express, and we think we’ve succeeded where many have failed.”

The high-end version of MailSite, MailSite DataCenter delivers a level of vertical scalability not previously available in Windows-based email server software. This capability is made possible by DataCenter’s close integration of its directory service with SQL databases. Rockliffe developed this feature in response to an overwhelming demand from Internet customers that wish to integrate membership databases and database driven web sites with email services.

“We have been testing the new MailSite 4 DataCenter from Rockliffe to deliver unified messaging services to over 750,000 subscribers. It has remained rock solid throughout the testing process,” said Robert Newman, founder of CoolEmail.com. “We are very impressed with the ease of installation and use,” Newman added, concluding that “MailSite is also far more cost effective than many of the alternatives, especially GroupWare alternatives.”

Rockliffe MailSite DataCenter also features horizontal scalability while maintaining proven reliability with its new clustering capability. MailSite clustering now enables customers to distribute email load from users over two or more machines. This allows customers to support one million subscribers or more on each server while maintaining maximum up-time. MailSite clustering works with any version of Windows NT and Windows 2000, and does not depend on Microsoft's clustering implementation.

From the company's inception, Rockliffe has been committed to leading the market in email and communications software designed specifically for Windows NT. Rockliffe's flagship product, Rockliffe MailSite, is remarkably easy to use, and can quickly accommodate additional users with minimal additional investment in hardware, software, personnel and premises. Rockliffe MailSite's unique scalability provides an affordable long-term email solution for companies and organizations of all shapes and sizes, from the smallest partnership to the largest service provider.

Rockliffe MailSite 4 DataCenter will be available in February 2000 from Rockliffe. Prices start at one dollar per user.

The Rockliffe MailSite 4 product family also includes MailSite 4 Enterprise for up to 50,000 users, MailSite 4 Department for up to 5,000 users, and MailSite 4 Workgroup for up to 500 users, at a cost of only \$495.

MailSite Express is bundled at no additional cost with each MailSite product.
