FOR IMMEDIATE RELEASE

Rockliffe Announces Multi-lingual Versions of its Scalable Web Messaging Software, MailSite Express, to Meet Increasing International Demand

Growing in popularity worldwide, multi-lingual MailSite 4.2 reaches a market that is virtually untouched by competitors

SAN JOSE, CA, April 19, 2000-----Rockliffe, a leading developer of scalable Internet e-mail server software for Windows NT/2000, today announced that its new version MailSite 4.2 Express supports the English, Spanish, French, Chinese, German, Turkish, Bulgarian, Indonesian and Portuguese languages. These language capabilities address the needs of service providers in all major markets throughout the world.

“Rockliffe’s MailSite Express was chosen based on our anticipation to grow tremendously in a small amount of time,” said Fabian Lucchi, president of Infomaniak Network (<http://www.infomaniak.ch>), a major ISP in Switzerland. “We researched and found that MailSite Express not only offered the level of performance and scalability we needed, but was considered the best of breed for ease of installation, low cost, dynamic support, and branding capabilities.”

Lucchi added, "We were able to brand MailSite Express in record breaking time, hosting web e-mail in multiple languages out of the box with no additional changes."

According to the November 1999 study, "Messaging Software Deployment within the Service Provider Market", written by research firm, Radicati (<http://www.radicati.com>), "The popularity of web-based messaging is rapidly changing the landscape of the service provider market. It has become necessary to offer more reliable, robust e-mail services to an ever-growing population of subscribers. The total value of the hosted mailbox market reached \$2.1 billion in 1999, and is expected to grow to \$6.3 billion by 2003."

Rockliffe developed MailSite Express 4.2 with these projections in mind. MailSite Express allows corporations and service providers of all sizes to provide an Internet e-mail service that can be accessed from any web browser, anywhere, at any time. Building on the standards set by Microsoft Hotmail™ and Yahoo Mail™, MailSite Express will allow anyone to set up their own web-based e-mail service with ease. MailSite Express is built using Active Server Pages, which make it easy and quick to brand and customize with corporate logos.

With a worldwide vision in mind, Rockliffe opened an office in Europe last year. "Rockliffe is achieving its goal to become the number one choice in the International market for Internet e-mail server software," said Rockliffe's president and CEO John Davies. "It was the obvious next step Rockliffe needed to take in order to fulfill customer demand." He continued, "We are globally committed to provide the best products to those demanding top performance, style and functionality."

From the company's inception, Rockliffe has been committed to leading the market in Internet e-mail and communications software designed specifically for Windows NT. Rockliffe's flagship product, Rockliffe MailSite, is remarkably easy to use, and can quickly accommodate additional users with minimal investment in

hardware, software, personnel and premises. Rockliffe MailSite's unique scalability provides an affordable long-term e-mail solution for companies and organizations of all shapes and sizes, from the smallest partnership to the largest service provider.

MailSite 4.2 Express is available in March 2000 from Rockliffe.

MailSite Express is part of the Rockliffe MailSite suite of e-mail solutions for Windows NT and 2000. Rockliffe MailSite prices start at \$995 for up to 500 users.

Rockliffe also develops and sells MailSite DataCenter, a carrier-grade e-mail solution designed to scale effortlessly from hundreds of thousands to millions of users.
